

My Neighbor is Going Solar

What Should I Know?

Q: How long will the install crew be in my neighborhood?

A: The installation can take anywhere from 1-3 days.

Q: Will I see any interruptions in my service?

A: Not at all! The solar system is wired locally into the main electric panel of a home, and has safety measures in place to protect residents and workers.

Q: Will I see any changes in my utility bill?

A: No, you won't be billed any differently. Some of your electricity may now come from your neighbor's solar panels, but that will only reflect as a credit on *their* bill.

Q: Why are homes in my community going solar?

A: Solar is saving homeowners money. Traditional energy costs have gone up 500% since 1971, and the recent trend is about 5% per year (U.S. Dept. of Energy). Many homeowners can now ditch the utility monopoly and jump on solar for no money down, and a lower amount per month than they currently spend for electricity.
